

# Endocrine Disease in Dogs

The ISCA Foundation is proud to offer a seminar given by Brian Petroff DVM PhD on Tuesday May 13th at 4pm.

*"Endocrine Disease in Dogs"* will be an overview of the importance of endocrine function in your dog. A couple of recent thyroid studies and the breed specific study sponsored by the ISCA Foundation on thyroid function will also be discussed.

Endocrine disease can effect the thyroid gland, adrenal gland or the pancreas. These diseases can include Diabetes, Cushing's disease, Addison's Disease. The thyroid hormone is necessary for normal metabolism and the health of every cell in your dog's body.

## ***Come learn with us!***

Thyroid samples drawn at our National Specialty will be done at no cost, thanks to a generous bequest from Wendy & Matt Czarnecki. This clinic will take place every year at our National Specialty. Samples will be run at Michigan State University and added to the database there, being maintained at MSU.

*RSVP has to be received by April 6.*
