

Test-and-Intervene:

Toward a World Where We No Longer Fear Cancer

Jaime F. Modiano, VMD, PhD
Perlman Professor of Oncology
and Comparative Medicine
Director, Animal Cancer Care and
Research Program
College of Veterinary Medicine and
Masonic Cancer Center
University of Minnesota

The ISCA Foundation is proud to offer a seminar given by Jaime F. Modiano, VMD, PhD

Imagine a future where we can identify dogs at increased risk of cancer and take action before the disease develops. Our Test-and-Intervene strategy is designed to make that future possible by using simple blood tests to recognize changes in the body that may increase cancer risk, then finding ways to reduce that risk. We are developing three complementary approaches, Shine On, COED, and LyRA, that look for different warning signs and help us understand why some dogs develop cancer while others do not. Our goal is to help dogs live longer, healthier lives without the fear of cancer, while making discoveries that could someday benefit people, too.

We are grateful for the support from the AKC Canine Health Foundation for their enduring support of our research, and particularly to the ISCA and the Foundation, which helped make possible our progress in the COED project.
